

## What's a phone system without a phone?

**Fonality** offers a wide variety of high-value IP phones, which are hand-selected based on their call quality and feature set. Once selected, the phones are put through a rigorous screening and testing process before Fonality officially certifies them. This process ensures that PBXtra™ customers have the highest degree of flexibility to choose the best phones from the best manufacturers with features and prices that meet their business needs.

Fonality not only provides the phones, but provisions and supports them as well. IP phones, like computers, have software inside that needs to be updated and programmed. Every manufacturer has different software and, consequently, a different process for updating and programming that software. Because this process is time-consuming and can take up to an hour per phone, Fonality provisions all IP endpoints to work with PBXtra before they ever leave the warehouse. Once programmed and tested, most phones will offer call transfer, paging, 3-way calling, mute, Do Not Disturb, one-key voicemail, and messaging-waiting indication features right out of the box!

Whether a Fonality customer selects entry-level, executive, wireless or conference phones, Fonality ships them ready to use immediately.
